

Congratulations on purchasing an original work of metal art from MóZ Designs. MóZ Art is an easy-to-install art piece consisting of 1/8-inch aluminum (framed or unframed) that is attached to the wall using a Z-Clip system.

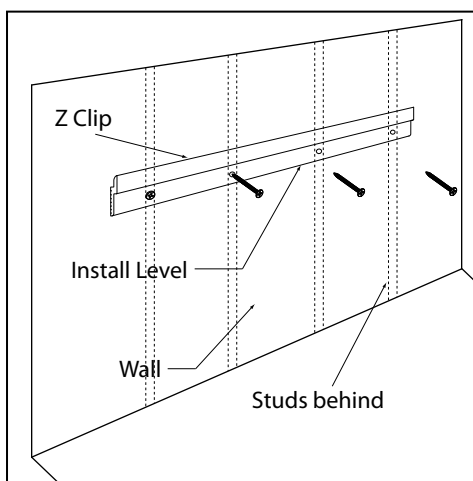

Your MóZ Art piece is packaged with:

(1) ea. Pre-drilled Z-clip Bracket. This bracket attaches to the wall. If your wall has significant bow in or out you may have to shim the Z-clip bracket straight to accommodate the art channel.

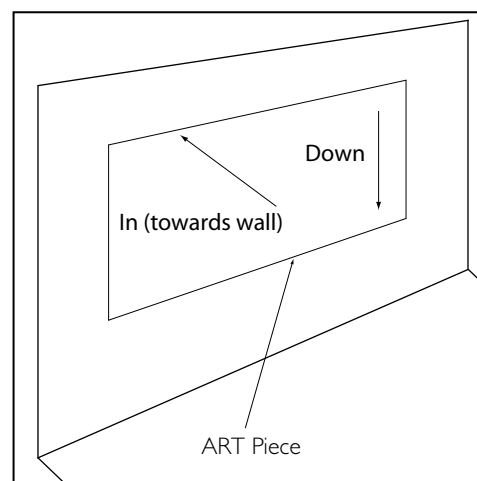

(4) ea. Drywall Screws. These are for use in drywall only, in the event a stud or wood backing is not available at the hanging location, please purchase applicable fasteners.

1 Your MóZ Art piece is fabricated with an integral channel on the back so you can hang your art horizontally or vertically on the Z-clip bracket provided.

2 Attach the Z-clip bracket to the wall. Measure your intended hanging location, mark the hole locations, and screw the Z-clip bracket to the wall.

3 Place art piece on wall centered on and slightly above the Z-clip. Now gently pull down on the art piece (continuing to put pressure against the wall) until the back channel firmly seats in the Z-clip.

Step 1) Determine the orientation that the MóZ Art piece will be hung i.e. vertical or horizontal. Position the Z-clip in the desired location, ensuring it is level, with the top of the clip 4-5/8" below the desired finish height of the art piece. Keep in mind that you need at minimum a 1/2" clearance above the finish height to accommodate the 3/8" lift required for the clip system.

Step 2) Mark hole locations if necessary and secure the Z-clip to the wall with fasteners suited to your substrate. If no studs are available at the attachment site use the supplied drywall anchors and screws.

Step 3) Place art piece with the back channel centered on, slightly above the Z-clip and firmly against the wall. Now gently pull down on the art piece (continuing to put pressure against the wall) until the back channel firmly seats in the Z-clip.
