

MÓZ DESIGNS INTRODUCES IMAGINATIVE NEW DIGITAL IMAGERY FOR ARCHITECTURAL SURFACES

OAKLAND, CA

Móz Designs announces the introduction of Digital Imagery,

a dynamic new metal collection featuring imaginative graphics for architectural surfaces, including

walls, columns, ceilings, signage, retail displays and other applications.

Móz integrates the visuals of a photograph or abstract image with the textural grains of Móz metals for a unique multi-layered effect. Images are printed on Móz solid core or perforated aluminum, and Móz colors and gradients can be added to each sheet to create a unique custom look.

Digital Imagery allows exceptional flexibility for design creativity. Customers can select professional quality images from the Móz Library, or can submit

their own high resolution photos for printing. The images are printed on .040" to .090" thick aluminum. Durable finishes are available in gloss or matte.

Standard printable sheet size are 4' x 8' and 4' x 10' offering precise panel-to-panel registration and edge matching capabilities. Custom sizes can also be ordered and all Móz metal artwork is shipped ready to install.

Móz metal products are fabricated from 80 percent post-industrial recycled material and contribute to LEED 2.0 MR Credit 4, Recycled Content.
