

Metals + Architectural Products

### Metal Elements Support Patient Welfare Baylor Waxahachie Case Study

The Baylor Scott & White Medical Center is a 129-bed capacity, state-of-the-art hospital that replaced the century-old Baylor Waxahachie located in Waxahachie, Texas. More than double the size of the former center, the new, technologically-advanced facility features expanded women's health services and a dedicated cancer center connected to the hospital – a first for Ellis County. The hospital provides care options for the current community and allows for expanded growth to meet future healthcare needs

CallisonRTKL helped the medical center achieve its goal of creating a holistic healing environment by sourcing Móz Metals to manufacture an aluminum headboard feature that adds a whimsical, linear pattern and a cool, reflective surface to patient rooms. The Flare pattern in Earth derives from the Graphix Collection, a line of multi-layered printed metal surfaces inspired by timeless textile patterns. The aluminum metal is sealed with a Polycoat Gloss finish, which creates a durable plastic barrier that can be easily sterilized within a healthcare environment.

The architectural metal element inside each patient room at the Baylor Scott & White Medical Center helps reinforce the design concept and improve the health, safety and welfare of patients, staff and visitors.

### **Project Details**

Industry: Healthcare

Location: Waxahachie, Texas

Designer: CallisonRTKL

Application: Metal Sheets

Product: Graphix

Material: Aluminum Metal

Color: Earth

Pattern: Flare

Grain: Coarse

Finish: Polycoat-Gloss

### **About Móz Designs**

Móz Metals and Architectural Products designs and fabricates contemporary metal products in Oakland, CA. Móz' collection of sophisticated materials and patterns, including gradients, metallics and neutrals are the result of continuous experimentation with cutting-edge tooling, engravings and equipment. Móz craftsmen redefine surfaces using a delicate balance of texture, grain and color to create unique architectural metals for projects of all sizes - from large scale technical projects to small installations. Móz' innovative materials and products, custom solutions and dedication to customer service help clients achieve their design intent on time and on budget.
