

## Composites

### 1 Speckled Surface

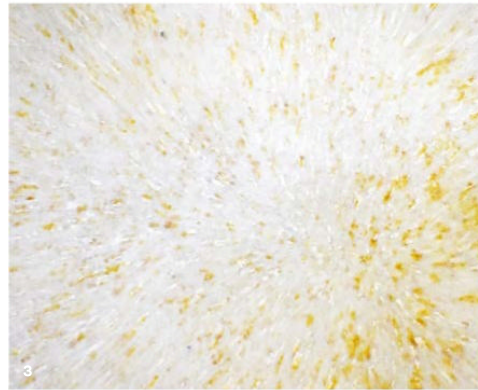

Offered in 10 colourways (shown here are Polar Sky and Arctic Blue), three thicknesses (6.4, 9.5 and 12.7 millimetres) and two panel sizes (1.2 by 2.4 and 1.2 by 3.0 metres), Flek is 3form's latest addition to its sustainable Varia Ecoresins. The versatile surface features a subtle terrazzo-like design. [3-form.com](http://3-form.com)

### 2 Protective Panels

Móz Designs' new line of clear, frosted and patterned acrylic dividers is made for hospitality and healthcare environments. Durable and easy to clean, these adaptable solutions come in three mounting options (frame, cable or post) and as curved or flat modules with standard or bespoke graphics. [mozdesigns.com](http://mozdesigns.com)

### 3 Recycled Results

As its moniker suggests, the Good Plastic Company manufactures products that are good — in an environmental sense, that is. Now available in one-by-one-metre and one-by-two-metre panels, these surfaces are made of recycled post-industrial and post-consumer plastic waste. ## Exterior

### 1 Custom Effects

UNStudio unveiled a striking and sinuous new facade in the Netherlands thanks to custom architectural glass manufacturer Cricursa. The sweeping form of the low-iron curved and flat material was produced using a slow annealing process in combination with custom moulds. ### 2 Power Surge

MyEnergySkin's line of textured tempered-glass solar facade and roof modules by Kiki & Joost produce up to 120 watts per square metre. The 0.59-by-1.19-metre photovoltaic cladding comes in six designs, with two patterns offered in 59-by-40-centimetre tiles. ### 3 Curves Ahead

To achieve the complex organic forms of Quebec's Drummondville Library, Chevalier Morales Architectes enlisted local manufacturer Prelco. The resulting glazing system, composed of silkscreened laminated bent glass, gives the new structure its distinct ethereal qualities.
